

National Education Policy – 2020

Common Minimum Syllabus for State Universities and Colleges of Uttarakhand

Four Year Undergraduate Programme- FYUP/Honours Programme/ Master's in Science

PROPOSED STRUCTURE FOR FYUP/ MASTER'S IN ZOOLOGY SYLLABUS

DEPARTMENT OF ZOOLOGY

Syllabus Expert Committee

S.No.	Name	Designation	Department	Affiliation
1.	Prof. H.C.S. Bisht	Head and Convener	Department of Zoology	Kumaun University, Nainital
2.	Prof. D.M.Tripathi	Head and Convener	Department of Zoology	S.D.S. University, Rishikesh
3.	Prof. Ila Bisht	Head and Convener	Department of Zoology	S.S.J. University, Almora
4.	Dr. Neeti Pande	Assistant Professor (External Subject Expert)	Department of Zoology	University of Delhi
5.	Dr. Aravinda	Coordinator(External Subject Expert)	Biology	IISC Challakere
6.	Dr. N.G. Prasad	Professor(External Subject Expert)	Zoology	IISER Mohali

Syllabus Preparation Committee

S.No.	Name	Designation	Department	Affiliation
1.	Prof. H.C.S. Bisht	Head and Convener	Department of Zoology	Kumaun University, Nainital
2.	Dr. Manoj K. Arya	Associate Professor	Department of Zoology	Kumaun University, Nainital
3.	Dr. Deepika Goswami	Associate Professor	Department of Zoology	Kumaun University, Nainital
4.	Dr. Sandeep Kumar	Associate Professor	Department of Zoology	S.S.J. University, Almora
5.	Dr. Mukesh Samant	Assistant Professor	Department of Zoology	S.S.J. University, Almora

6.	Dr. Himanshu P. Lohani	Assistant Professor	Department of Zoology	Kumaun University, Nainital
7.	Dr. Deepak K. Arya	Assistant Professor	Department of Zoology	Kumaun University, Nainital
8.	Dr. Divya Pangtey	Assistant Professor (Guest)	Department of Zoology	Kumaun University, Nainital
9.	Dr. Netra Pal Sharma	Assistant Professor (Guest)	Department of Zoology	Kumaun University, Nainital
10.	Dr. Sandeep DuttMaindoli	Assistant Professor (Guest)	Department of Zoology	Kumaun University, Nainital
11.	Dr. Uzma Siddiqui	Assistant Professor (Guest)	Department of Zoology	Kumaun University, Nainital
12.	Dr. Seeta Dewali	Assistant Professor (Guest)	Department of Zoology	Kumaun University, Nainital
13.	Dr. Deepak Chandra Melkani	Tutor cum Demonstrator	Department of Zoology	Kumaun University, Nainital

MASTER'S IN ZOOLOGY

FIFTH YEAR	IX	(DSC) - ZOO/DSC/IX/T	Ichthyology-IA (General Ichthyology)	Theory	3
			Entomology-IB (Systematics and Applied Entomology)		
			Animal Biotechnology-IC (General Animal Biotechnology)		
			Immunology-ID(Fundamentals of Immunology)		
		(DSC) - ZOO/DSC/IX/P	Laboratory Practical based on Theory Papers	Practical	1

		(GE2) – ZOO/GE2/X	Conservation Biology	Theory	4
		DISSERTATION	Dissertation on Major OR Dissertation on Minor OR Academic Project/Entrepreneurship OR Excursion/Field study	Theory/ Practical	6

Course Objectives (COs):

- The programme in Zoology aims to provide students with a strong foundation Core course in organismal and molecular biology, covering Non-chordata, Chordata, Cell Biology, Genetics and Physiology.
- It equips students with applied knowledge in Aquaculture, Reproductive Health, Animal Behavior, Immunology, Environmental Biology, Limnology, Microbiology and Biotechnology.

- The curriculum is designed to enable students to specialize in key disciplines such as Taxonomy, Ichthyology, Entomology, Conservation Biology and Toxicology through elective courses.
- The programme fosters interdisciplinary learning by offering generic electives in Computational Biology, Medical Laboratory Technology, Hydro Ecology and Research Methodology, attracting students from allied sciences.
- Practical-based skill development is emphasized through laboratory training in bioinstrumentation, histology, hematological techniques and immunodiagnostics.
- The course also integrates contemporary research trends such as Molecular Biology, Biomedical Technologies and Biofloc Fish Culture to develop industry-relevant expertise.
- It encourages students to engage in research and academic projects through dissertations, fostering analytical and problem-solving skills.
- Students will be equipped to address societal challenges, including environmental sustainability, wildlife conservation, public health and bioremediation.
- The programme ensures career readiness by offering skill-enhancement courses in areas like Pearl Culture, Sericulture, Vermiculture and Applied Zoology.
- Specialization such as Ichthyology, Entomology, Animal Biotechnology and Immunology gives an immense platform to pursue higher carrier opportunities.
- Graduates and Post graduates will have ample opportunities in education, healthcare, environmental management and biological research, with the potential to pursue advanced studies and innovative entrepreneurship.

Programme Objectives (POs):

- To develop a comprehensive understanding of biological diversity, structure and function across various animal taxa.
- To provide in-depth knowledge of cellular and genetic mechanisms governing life processes, preparing students for advanced research and applications.
- To foster an appreciation for evolutionary biology and animal ecology, emphasizing biodiversity conservation and sustainable practices.
- To equip students with expertise in applied sciences, including medical laboratory techniques, immunology and aquaculture.
- To enhance analytical and technical skills through practical training in molecular biology, cytology and bioinstrumentation.
- To instill research acumen through structured dissertations and academic projects in emerging areas of Zoology.
- To introduce students to interdisciplinary domains such as Environmental Biology, Toxicology and Computational Biology for holistic scientific learning.
- To promote entrepreneurial skills and job readiness through value-added courses in Intellectual Property Rights, Research Ethics and Emotional Intelligence.
- To enable students to critically assess biological challenges and contribute innovative solutions in health, agriculture and environmental sectors.
- To prepare students for diverse career opportunities, including academia, government organizations, conservation agencies and biotechnology industries.

MASTER'S IN ZOOLOGY

No. of Hours – 75[illegible]

Immunology – I D (Fundamentals of Immunology)						
--	--	--	--	--	--	--

MASTER’S IN ZOOLOGY		
Programme: Master’s in Zoology	Year: V	Semester: IX
		Paper: DSC
Subject: Zoology		
Course: DSC	Course Title: Ichthyology-I A (General Ichthyology)	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the general form, function, and diversity of fish. 2. Understand the morphological and physiological adaptations of fish and their role in the aquatic environment. 3. Understand general concepts of biogeography and evolution of fish. 4. Applying principles of phylogeny to understand fish adaptations. 5. Becoming familiar with principles of ecology and behavior of fish. 6. Learning basic external and internal anatomy of fish.		
Credits:4		Discipline Specific Course
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules

Theory		
Unit	Topic	No. of Hours
Unit I	Classification of fishes, Systematic position, habit and habitat, morphology, distribution, significance and affinities of Holocephali and Dipnoi. Fins, their origin and evolution; Locomotion in fishes. Histomorphology and elementary physiology (a) digestive system (with particular reference to food and feeding habits of freshwater fishes) (b) excretory system (with particular reference to acid base balance and osmoregulation).	15
Unit II	General survey of the marine, estuarine and inland capture fisheries of India with particular reference to fishery resources of Uttaranchal. Methods of fishing: Fishing gears and crafts. Cold water fishery Sewage-fed fishery, Shell–fish fishery. Nutrition and growth including age and growth relationship, chemical composition of fish flesh, length –weight relationship, Natural food and artificial feed and their role in fish culture. Plankton and benthos in relation to fish production.	15
Unit III	Electric organs in fishes. Accessory respiratory organs in fishes. Brief knowledge of sexual dimorphism, courtship and parental care. Migratory instincts, Hill stream adaptations Reproduction in a major carp- structure of gonad, spawning, early development and metamorphosis. Microscopic structure and hormonal functions of the following endocrine glands: Pituitary, Thyroid, Pancreas, Adrenal, Corpuscles of Stannins, Ultimobranchial glands, caudal neurosecretory system and Sex hormones. Current trends in induced breeding in fishes. Brief knowledge of	15

	sense organs: organs of smell, eyes, hearing, ampulla of Lorenzeni, Bioluminescence, sound production and lateral line system.	
Practical		
	1. Fish collection, tools and types of net used in fish sampling. 2. Fish Identification, Classification and Taxonomic studies of fresh water fishes. 3. Study of preserved fish specimens. 4. Detailed study of the skeleton of a Cyprinoid and a Siluroid fish. 5. Permanent preparation of scales, sensory, Ampullae etc. 6. Aquarium fabrication, setting and its Maintenance. 7. Different types of modern fish farming techniques used in Uttarakhand. 8. Determination of age with the help of scales. 9. Calculation of Gonado- Somatic Index and Determination of fish fecundity. 10. Analysis of basic hematological parameters of fish blood and preparation of permanent slide of fish blood. 11. Project Work and Field Report, field visits will be integral part of the Practical.	15
Recommended Readings Textbooks • Textbook of Ichthyology- K. C. and Nirupama Agrawal Pandey • A textbook of Fish biology and Fisheries – S. S. Khanna and H. R. Singh • Fish Physiology- William Stewart Hoar and David J. Randall		

- Fishes: A Guide to Their Diversity- Philip A. Hastings, H. G. Greene, and Conrad Limbaugh
- An Introduction to the Study of Fishes by James S. Nelson, Terry C. Grande, and Mark V. H. Wilson

Reference Book

- The Physiology of Fishes. 4th ed. Evans DH, Claiborne JB, Currie S. Boca Raton, FL: CRC Press; 2013.
- Fish Ecology. 1st ed. Pitcher TJ. New York.
- Ecology of Fishes. 1st ed. Wootton RJ. Dordrecht.
- Fish and Fisheries of India. 3rd ed. Jhingran VG. Delhi: Hindustan Publishing Corporation.
- Freshwater Fishes of the World. 1st ed. Axelrod HR, Burgess WE, Pronek N. New Jersey: TFH Publications.

OR

Course: DSC

Course Title: Entomology-I B (Systematic and Applied Entomology)

Course Outcomes:

After studying this course, the students will be able to:

1. Student will be able to classify insect up to their respective orders.
2. Understand the difference in the life cycles of insects.
3. Student will be able to describe various ecological importance of insects.
4. Understanding insect biology: Including general entomology, basic systematics, morphology, physiology and biodiversity.

Credits:4

**Discipline Specific
Course**

Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Ancestry and evolution of insects, Classification of insects, Principles of construction and use of dichotomous keys in insect. Methods of collection, preservation, Mounting and culture of insects. Brief knowledge of habit, habitats and general characters of the following orders with special reference to the families mentioned: Thysanura, Collembola, Odonata, Orthoptera (Acrididae, Tettigoniidae, Gryllidae), Phase theory in locusts, Phthiraptera (Anoplura, Mallophaga), Isoptera, Thysanoptera, Heteroptera (Pentatomidae, Belostomatidae), Homoptera (Aphidae, Coccidae), Coleoptera (Coccinellidae, Curculionidae, Scarabaeidae), Lepidoptera (Pieridae, Nymphalidae, Papilionidae, Noctuidae, Sphingidae), Hymenoptera (Apidae, Ichneumonidae, Formicidae); Diptera (Muscidae, Culicidae, Syrphidae).	15
Unit II	Principles and Practices of Pest Control: Pests defined: Categories of crop pests (key pests, occasional pests, potential pests and migratory pests) Pest control procedures: Natural control, applied control (Cultural, Biological and Insecticidal) Modes of action of insecticides, factors affecting toxicity of insecticides Non-insecticidal methods: Anti-feedents, Attractants and Repellents, Feeding deterrents, Chemosterilants, Pheromones and Insect Growth Regulators (IGR's).	15

Unit III	Integrated Pest Management (IPM) Insecticide Application Equipments: Sprayers, Dusters, Granule Applicators. Brief knowledge about 5 th generation insecticides. Distribution, habit and habitats, life-cycle, nature of damage and control of pests of: Stored grains (<i>Sitophilus oryzae</i> , <i>Tribolium castaneum</i> , <i>Callosobruchus chinensis</i>); Sugarcane (<i>Pyrilla perpusilla</i> , <i>Chio infuscatellus</i>); Paddy (<i>Leptocorisa acuta</i> , <i>Hieroglyphus banian/nigrorepletus</i>), Cotton (<i>Dysdercus koenigii</i> , <i>Pectinophora gossypiella</i>); Cereals (<i>Helioverpa armigera</i> , <i>Agrotis ipsilon</i>) Maize (<i>Spodoptera frugiperda</i>), Vegetables (<i>Raphidopalpa</i> (= <i>Aulacophora</i>) <i>foveicollis</i> , <i>Pieris brassicae</i>); Fruits (<i>Bactrocera</i> (= <i>Dacus</i>) <i>cucurbitae</i> , <i>Papilio demoleus</i>); Forests (Defoliator: Tasar silkworm, <i>Antheraea paphia</i> ; Sapsucker of Khamer or Gamhar, <i>Tingis beesoni</i> ; Teak borer, <i>Aeolesthes holosericea</i>); and Polyphagous Pests (Locusts, Termites)	15
Practical		
	1. Hands on training of Equipments and accessories used in collection of insects. 2. Hands on training of Equipments and accessories used in mounting and preservation of insects. 3. Survey of representative insect order in the forest, orchards, crop lands etc. 4. Prepare a chart or model of classification of insects up to family level. 5. Identification of insects using dichotomous keys up to family level. 6. Life-cycle of different kinds of insect pests i.e. cereals (Sugarcane, Wheat, Rice), vegetables, fruits, cotton and stored grains. 7. Life-cycle of defoliator insects.	15

	8. Taxonomic status, Life-cycle of Honey bee. 9. Taxonomic status, Life-cycle of Silk moth. 10. Taxonomic status, Life-cycle of Lac insect. 11. Life-cycle of House fly and Mosquito. 12. Comment on general characteristics, classification and habit, habitat of preserved museum insects. 13. Calculation of secondary productivity of herbivorous insects. 14. Sampling techniques for estimation of insect population. 15. Ecological adaptation of aquatic insects. 16. Project Work and Field Report, field visits will be integral part of the Practical.

OR

Course: DSC

Course Title: Animal Biotechnology –I C (General Animal Biotechnology)

Course Outcomes:

After studying this course, the students will be able to:

1. Successfully maintain cultures of animal cells and established cell lines with good viability, minimal contamination and appropriate documentation.
2. Perform supportive or episodic tasks relevant to cell culture, including preparation and evaluation of media, cryopreservation and recovery, and assessment of cell growth/health.
3. Recognize and troubleshoot problems common to routine cell culture.

Credits:4

**Discipline Specific
Course**

Max. Marks: As per Univ. rules

**Min. Passing
Marks: As per**

		Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Animal Cell Culture: Equipment and materials for animal cell culture technology. Design and layout of culture room, Sterilization and aseptic techniques. Culture medium: natural media, synthetic media, sera. Introduction to balanced salt solutions and simple growth medium. Brief discussion on the chemical, physical and metabolic functions of different constituents of culture medium, role of carbon dioxide, serum and supplements in animal cell culture. Characteristics of cells in culture: Contact inhibition, anchorage dependence, cell-cell communication. Mechanical and enzymatic disaggregation of tissue and setting up of primary cultures, Candling of eggs, preparation of chick fibroblast, culture of lymphocytes for chromosomal studies. Roller and Suspension culture techniques.	15
Unit II	Large-scale production of cells using bioreactors, micro- carries and perfusion techniques. Measurement of viability and cytotoxicity. Biological characterization of the cultured cells, karyotyping, cryopreservation and revival. Detection of contaminants in cell cultures. Fermentation technology for the growth of animal cells and their products (Bioreactors, Hollow fiber reactors, Air-lift fermentors, chemostats and microarriers). Established cell line cultures: Definition of cell lines, maintenance and management; cell adaptation. Stem cell cultures, embryonic stem cells and their	15

	applications. Somatic cell genetics. Organ and histotypic cultures. Cell cloning, cell synchronization and cell manipulation.	
Unit III	Various methods of separation of cell types, advantages and limitations; flow cytometry. Production and characterization of monoclonal antibodies and their application. Commercial applications of animal cell culture: cell culture-based vaccines, Tissue culture as a screening system; cytotoxicity, in vitro testing of drugs and diagnostic tests. Mass production of biologically important compounds (e.g. Vaccines and Pharmaceutical proteins). Production of recombinant hemoglobin, blood substituents, artificial blood. Harvesting of products, purification, and assays. Three dimensional cultures and tissue engineering (artificial skin and artificial cartilage).	15
Practical		
	1. Media preparation and sterilization for animal cell culture 2. Primary cell culture of fish organ 3. Restriction digestion of plasmid DNA/genomic DNA 4. PCR for cloning a DNA segment 5. Construction of circular and linear restriction map from the data provided 6. To study - Southern Blotting, Northern Blotting and Western Blotting 7. To study - DNA Sequencing, Sanger's Method, DNA fingerprinting 8. Good Laboratory Practices (GLP); ELISA (Demo online). 9. Project Work and Field Report, field visits will be integral part of the Practical.	15

OR**Course: DSC****Course Title: Immunology – I D (Fundamentals of Immunology)**

Course Outcomes:

After studying this course, the students will be able to:

1. Understand Immunology and the way it is applied in diagnostic and therapeutic techniques and research.
2. Train the students with essentiality of molecules, cells, tissues and organs involved in the defense mechanism.
3. Learn of techniques involved in understanding the immunological aspects of physiology and biological samples.

Credits:4**Discipline Specific
Course****Max. Marks: As per Univ. rules****Min. Passing
Marks: As per

Hours****Unit I**

Introduction and Historical Background: Cells and Organs of Immune system
Definition, Overview of immune system- Anatomical, Physiological and Inflammatory
barriers. Major contribution of following scientists- Edward Jenner, Jacob Henle,
Louis Pasteur, Joseph Lister, Robert Koch, Paul Ehrlich, Elie Metchnikoff, Emil von
Behring, Jules Bordet, Karl Landsteiner, Jules Freund, Peter Gorer and George Snell,
Tiselius and Kabat, Gerald Eldelman and Rodeny Porter, Cesar Milstein and Georges
Kohler, Peter Doherty and Rolf Zinkernagel Hematopoiesis – formation of B-
lymphocytes and T-lymphocytes and its regulation. Cells of the immune system- NK
Cells, B-lymphocytes, T-lymphocytes, Granulocytic cells, Dendritic cells Primary

15

	lymphoid organs and their functional role- Bone marrow, Thymus. Secondary lymphoid organs and its functional role- Lymph nodes, Spleen, Mucosal-Associated Lymphoid Tissue [MALT], Intraepithelial Lymphocytes [IEL], Cutaneous-Associated Lymphoid Tissue [CALT]	
Unit II	Antigen and Immunogen, Structure and Function of Immunoglobulins, Structure and function of MHC: Antigen- definition and its properties. Immunogen-definition and its properties. Antigenecity vs. Immunogenicity and factors affecting it. Haptens and Adjuvants. Basic structure of immunoglobulin. Classes of immunoglobulin and its biological activities. Major Histocompatibility Complex [MHC] - Structure, types and function. Regulation of MHC expression. Production of Monoclonal antibodies, its mechanism [de novo and salvage pathway] and application in research and health.	15
Unit III	Primary and Secondary line of Defence [Innate and acquired immunity], Antigen-Antibody interactions: Innate immunity- Phagocytic barriers. Antigen presenting cells. Antigen processing and presentation. Acquired immunity- B-cell mediated immunity, T-cell mediated immunity its mechanism and regulation. Immune memory of B-lymphocytes. Structure of antibody, Treatment of antibody with pepsin, papain, β -mercaptoethanol and DMSO. Interaction of Antigen-Antibody- antibody affinity, antibody avidity, cross reactivity, precipitation reactions, Agglutination reactions	15
Practical		
	1. ELISA (Enzyme-Linked Immunosorbent Assay) for detecting the presence of specific antibodies or antigens in a sample. 2. Flow Cytometry to analyze the expression of specific cell surface markers on	15

	immune cells. 3. Western blotting to analyze the expression of a particular protein in immune cells or tissues. 4. Immuno fluorescence microscopy to visualize the distribution of antigens or antibodies in immune cells or tissues. 5. Mixed Lymphocyte Reaction to measure the proliferation of T cells in response to stimulation by alloantigens from another individual. 6. Project Work and Field Report, field visits will be integral part of the Practical.

MASTER'S IN ZOOLOGY

Programme: Master's in Zoology

Year: V

Semester: IX

Paper: DSE

Subject: Zoology		
Course: DSE1	Course Title: Mammalian Endocrinology	
Course Outcomes: After studying this course, the students will be able to: • Understand the role of hormones in regulating various physiological processes in mammals, including metabolism, growth, reproduction and stress response. • Learn about the anatomy and function of major endocrine glands such as the pituitary, thyroid, adrenal, pancreas and gonads, as well as the hormones they produce and their mechanisms of action. • To analyze and interpret feedback mechanisms involved in endocrine regulation, including negative and positive feedback loops, and understand how disruptions in these mechanisms can lead to endocrine disorders. • Apply their knowledge of mammalian endocrinology to real-world scenarios, such as diagnosing and treating endocrine disorders, understanding the hormonal basis of diseases, and designing hormone-based therapies.		
Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours

Unit I	Brief history and scope of endocrinology. Chemical nature, classification and mode of secretion of hormones, hormonal feedback in homeostasis. Mechanisms of hormone action: Complete knowledge of the generalized mechanisms of action (at molecular level) of protein (Plasma membrane mediated actions as well as intracellular CAMP mediated actions) and steroid hormones (nuclear activity mediated actions).	15
Unit II	Hypothalamo-hypophysial System: General organization, Neuro-hypophysial octapeptides, Adeno-hypophysial hormones. Detailed structure of mammalian Pituitary gland and synthesis, storage, control of release, transport, denaturation, physiological actions, morphological and chemical consequences of excess and deficiency of various pituitary hormones. Endocrine Pancreas: Detailed structure, Biosynthesis and physiological actions of insulin and glucagon. Thyroid Gland: Detailed structure, biosynthesis of thyroid hormones, control of secretion, transport, denaturation, physiological roles, morphological and chemical consequences of excess and deficiency of various thyroid hormones.	15
Unit III	Parathyroid Gland: Synthesis of parathyroid hormones, Role of parathormone: Calcitonin and vitamin-D in calcium homeostasis. Adrenal gland: Adrenal Cortex: Detailed structure, Organization, physiological roles and control of mineralocorticoides and glucocorticoids secretion. Adrenal Medulla: Detailed structure, Catecholamine, biosynthesis, release and its physiological roles. Pineal gland: Detailed structure, physiological actions of pineal hormones. Reproductive endocrinology: Molecular structure, origin, release and transport of sex hormones and their role in reproductive physiology (Hormonal regulation of Oestrus and Menstrual	15

	cycle and that of lactation). Environmental endocrinology: A brief knowledge of environmental endocrinology.	
Practical		
	1. Study of the Mammalian Pituitary, Thyroid Gland, Parathyroid Gland, Adrenal gland, Pineal Glands, Pancreas etc. 2. Disorders related to Endocrine Glands with the help of chart / photographs/ models. 3. To perform the technique of home test kit for pregnancy.	30
Recommended Readings Textbooks • Endocrinology – Mac E. Hadley • Mammalian Endocrinology – B. N. Yadav • Concepts of Endocrinology – F.Y. Peyami • Mammalian Endocrinology and Male Reproductive Biology- Shio Kumar Sing • Mammalian Endocrinology- Ashoke Kumar Boral • Mammalian Endocrinology- Manju Yadav • Mammalian Physiology: A Course of Practical Exercises- Charles Scott Sherrington • Mammalian Endocrinology- Raghvendra Puri

MASTER'S IN ZOOLOGY

Programme: Master's in Zoology		Year: V	Semester: IX Paper: DSE
Subject: Zoology			
Course: DSE1	Course Title: Reproductive Health		
Course Outcomes:			

After studying this course, the students will be able to:

- Understand the Concept of Reproductive Health
- Explain Human Reproductive Systems
- Describe Reproductive Health Issues and Solutions
- Understand Family Planning and Contraception

Credits:4

**Discipline Specific
Elective**

Max. Marks: As per Univ. rules

**Min. Passing Marks:
As per Univ. rules**

Theory

Unit	Topic	No. of Hours
Unit I	Reproductive Health- historical aspects and significance. Right to healthy and respectful relationships, health services. Safe and appropriate access to accurate information. Effective and affordable methods of contraception Access to timely support and services. Sexually transmitted diseases (HIV, reproductive tract) and their containment.	15
Unit II	Sex education, contraception and health care in pregnancy. Historical trends in maternal and neonatal outcomes. The ante- natal, perinatal, postpartum and new born care. Providing high-quality services for family planning, including infertility services.	15

	Abortions and their health implications	
Unit III	Birth control, meaning and role in population regulation. Significant facts about birth control. Genetic Abnormalities. Human Immunodeficiency Syndrome (HIV/AIDS) and human reproductive health. Pregnancy and Diet. Family Size, sexual healthy life and significance. Care and its importance for mother and the growing baby. Public Aspects of Human Sexuality and Family Planning. Legal measures and the reproductive health.	15
Practical		
	1. Study of animal house: set up and maintenance of animal house 2. breeding techniques, care of normal and experimental animals 3. Examination of vaginal smear rats from live animals 4. Surgical techniques: principles of surgery in endocrinology 5. Ovariectomy, hysterectomy, castration and vasectomy in rats 6. Examination of histological sections from photomicrographs/ permanent slides of rat/human: testis, epididymis and accessory glands of male reproductive systems 7. Sections of ovary, fallopian tube, uterus (proliferative and secretory stages), cervix and vagina	30

	8. Human vaginal exfoliate cytology 9. Sperm count and sperm motility in rat; Study of modern contraceptive devices.

Textbooks:

- Human Reproductive Biology, 2006 by Kristin H. Lopez and Richard E Jones, Academic Press.
- Essentials of Gynecology by Snehamay Chaudhary.

DISCIPLINE SPECIFIC ELECTIVE (DSE) – Developmental Biology

No. of Hours – 75

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title	Credits	Credit distribution of the Course			Eligibility criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/Practice		
DSE:Developmental Biology	4	3	0	1	Passed Class XII with Biology	Nil

MASTER'S IN ZOOLOGY

Programme: Master’s In Zoology		Year: V	Semester: IX Paper: DSE
Subject: Zoology			
Course: DSE2		Course Title: Developmental Biology	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the basic concepts of developmental biology. 2. Understandthe concept of hormonal regulation of reproduction. 3. Describe the morphological processes that transform a fertilized egg into a multicellular organism. 4. Explain the molecular, biochemical, and cellular events that regulate the development of specialized cells, tissues, and organs during embryonic development.			
Credits:4			Discipline Specific Elective
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Theory			
Unit	Topic		No. of Hours

Unit I	Fertilization: Mechanism of fertilization, early and late changes in egg organization caused by fertilization, molecular events during fertilization. Mechanism of fertilization in Sea Urchin. Cleavage and Blastulation: Patterns of cleavage, determinate and indeterminate cleavage with examples, influence of yolk on cleavage, metabolic changes during cleavage, morulation and blastulation in frog, chick and rabbit, types of blastulae. Gastrulation: Fate maps, morphogenetic movements in frog, chick and rabbit, significance of Gastrulation, exogastrulation. Development and functions of the foetal membranes in chick and mammals.	15
Unit II	Organogenesis: Development of brain, eye and heart in chick Anterior and posterior regions development in <i>Drosophila melanogaster</i> . Role of polarity genes (hunchback, bicoid and nanos) in anterior and posterior regions. Organizer Concept: Embryonic induction, primary organiser and its morphological differentiation, origin of primary organizer, inductive interactions, nature of inductive signal (Possible mechanism of neural induction) competence. Basic introduction to β -catenin pathway, ingression, epiboly, delamination, involution and invagination. Regeneration and Metaplasia: Distribution of regenerative ability, polarity in regeneration, mechanism of regeneration of amphibian limb and lens, metaplasia, super-regeneration and heteromorphosis.	15
Unit III	Metamorphosis: Kinds of metamorphosis, metamorphosis in Amphibians, Physiological and biochemical changes during metamorphosis, hormonal control of metamorphosis. Teratogenesis: Genetic and environmental Teratogenesis, phenocopies, developmental mechanisms of teratogenesis. Ageing: Theories of	15

	Ageing (Quantative Changes in Nucleic Acids, Changes in Information Content, Changes in Protection Regulatory Mechanisms, Free Radical Theory of Ageing), Ageing and Immunological Surveillance (Somatic Mutation Hypothesis, Function of Thymus, Immune Surveillance); Ageing of Connective Tissue; Mental Aspects of Ageing.	
Practical		
	1. Study of the permanent slides of the chick embryos (whole mounts) and those showing the embryology of frog. 2. Study of eggs from collected / preserved material 3. Study of development of frog, chick through models/charts 4. Study of chick embryos from 16-18 hrs, 24-28 hrs 33-36 hrs, 42-72 hrs of development (Whole mount models, charts)	30
Recommended Readings Textbooks • Vertebrate Development: Maternal to Zygotic Control: 953 (Advances in Experimental Medicine and Biology)- Francisco Pelegri, Michael Danilchik • An Introduction to Embryology – B. I. Balinsky • Comparative Anatomy and Developmental Biology (Z-72)- Prof. R. L. Kotpal (Rastogi Publications) • Developmental Biology- Scott F. Gilbert and Michael J. F. Barresi • Developmental Biology- Scott F. Gilbert and Susan R. Singer • Essential Developmental Biology - Jonathan M. W. Slack and Leslie Dale

DSE: Avian Diversity and Behavior	4	3	0	1	Passed Class XII with Biology	Nil

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: IX

Paper: DSE

Subject: Zoology

Course: DSE2	Course Title: Avian Diversity and Behavior	
Course Outcomes:		
After studying this course, the students will be able to:		
• Understand Birds Diversity of India • Understand Birds Diversity of Uttarakhand • Understand Threatened, Endemic and Migratory Birds • Understand Different behavioral and ecological aspects • Know about the status and distribution of avian fauna of various habitats • Gain knowledge to identify the different species of Birds • Photography knowledge • Bird watching ethics		
Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Introduction to Ornithology; Avian Diversity and Classification, Introduction to Birds: morphology, anatomy, food and feeding habits; Life History, Foraging Behaviour; Mating and Breeding Behaviour, Social Behaviour; Vocal Behaviour: Mechanisms; Ecology and Evolution; Vocal Behaviour: Case Study, Migration;	15

	Bird Populations, Concepts of Bird Communities, Mixed species flocks; Avian Disease. Body plan in birds: topography, feathers, avian flight, flight adaptation in birds.	
Unit II	Importance of birds, Breeding Biology, Territoriality, Nesting, Eggs, Incubation and care for the young, Brood parasitism. Birds Behaviour, Flying, Walking, Eating, Perching on trees or wires, Drinking water, Singing, Nesting, Preening, Moulting, Bathing, Dust bath, Flocking, Roosting etc, Understanding Camera basics and lenses and light conditions, Equipment for Bird Watching, Famous ornithologists of the World.	15
Unit III	Diversity and distribution of birds in India, notes on speciation in Indian birds. Endemism in Indian avifauna- endemic bird areas of India. Endangered and endemic birds of India and Uttarakhand. Status and distribution of birds in Uttarakhand. Major sites for migrant birds in India and Uttarakhand. Threats to migratory birds population sites in India and Uttarakhand. Flightless birds: status and distribution	15
Practical		
	1. Study of Bird Populations and Communities: Techniques 2. Case Study, Avian Conservation: Concepts; Case Studies 1 (House Sparrow Conservation Project); Avian Conservation Case Studies 2 (Asian Vultures Conservation Project). 3. Study of Photographing- water bird, Small perching birds, Birds in Dark Forest, Waders, Birds in urban setting etc. 4. Project Work and Field Report, field visits will be integral part of the	30

	Practical. Field trips for bird study, the trip will be day trips, three days camp for study of bird and their habitats, Visits to nearby Zoo, Museum, Forest, Nursery, Aquaria or any other relevant site must be arranged. The report of these visits will be submitted as part of the Practical work. Preparing of PPT, followed by student presentation. 5. Field visits to major sites for migrant birds – both wetlands and forests; field exercise in censusing and monitoring of migrant birds; analysis of eBird data on migration phenology of common migratory birds of India. 6. Group discussion/seminar on specific issues of bird conservation with case-studies from India and other Himalayan states.

DISCIPLINE SPECIFIC ELECTIVE (DSE) – Basic Limnology

No. of Hours –

75

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course Title	Credits	Credit distribution of the Course			Eligibility criteria	Pre-requisite of the Course (if any)
		Lecture	Tutorial	Practical/Practice		
DSE:Basic Limnology	4	3	0	1	Passed Class XII with Biology	Nil

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: IX

Paper: DSE

Subject: Zoology

Course: DSE3

Course Title: Basic Limnology

Course Outcomes:

After studying this course, the students will be able to:

1. Get knowledge of relevance in limnology to analyze and evaluate abiotic and biotic conditions in aquatic systems.
2. Understand about the Inland Water bodies.
3. Understand the distribution and dynamics of plankton and benthos of freshwater bodies.
4. Knowledge of morphometry, physico-chemical and biological characteristics of fresh water bodies.
5. Understand the significance of aquatic flora, fauna, insects, birds and macrophytes in water bodies.

Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Introduction and Development of Limnology in India. Inland, Waters Distribution of Inland Waters: Ponds, Lakes, Streams, River. Lakes: Thermal Classification of Lakes, Famous Lakes of India and World, Nature of Inland Water Environment. Physical Characteristics: Pressure, Compressibility, Density Mobility, Buoyancy, Movement of Water Thermal Stratification Light, Color and Turbidity.	15
Unit II	Chemical Characteristics: Dissolved Gases – Oxygen, Carbon Dioxide and Other Dissolved Gases Dissolved Solids and Dissolved Organic Matter Influence of Physical and Chemical Conditions on Living Organisms in Inland Water Bodies. Planktonic Organisms: Classifications of Organisms in Water Distribution of Plankton Food for Plankton Organisms.	15
Unit III	Biological Productivity, Circulation of Food Material, Classification of Lakes Based on Productivity, Laws of Minimum, Biotic Potential and Environmental Resistance, Quantitative Relations in a Standing Crop Water Pollution, Eutrophication, Algal Blooms, Water Borne Diseases and Drinking Water Parameters Bioremediation of Polluted Water Bodies.	15
Practical		

	1. Determination of basic physico-chemical parameters of given water samples 2. Estimation of free CO₂ 3. Determination of DO 4. Determination of pH 5. Determination of turbidity 6. Estimation and observation of microbial diversity of tap water, polluted water and sewage 7. Measurement of primary productivity 8. Qualitative and quantitative analysis of Phytoplankton 9. Qualitative and quantitative analysis of Zooplankton 10. Qualitative and quantitative analysis of benthos 11. Determination of total alkalinity 12. Determination of hardness	30

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: IX

Paper: DSE

Subject: Zoology		
Course: DSE3	Course Title: Aquatic Diversity	
Course Outcomes: After studying this course, the students will be able to: • Understand the different type of aquatic environment, importance of interaction of abiotic and biotic factors • Study the aquatic ecology and ecological modelling		
Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	History and Development of Limnology in India. Inland,Water Distribution of Inland waters Lentic and lotic water bodies Lakes: Thermal Classification of lakes, famous lakes of World, India and Uttarakhand. Physical characteristics: Radiant energy and optics, Density and thermal properties, Buoyancy, Compressibility, Thermal Stratification, Movement and suspended solids.	15

	Chemical Characteristics Dissolved gases- Oxygen, Carbon dioxide, pH and the hydrogen ion, Nitrogen, Phosphorus, Dissolved solids and dissolved organic matter. Influence of physical and chemical conditions on living organisms in inland water bodies.	
Unit II	Aquatic Ecosystem's structure and function: littoral Zone, limnetic zone, profundal zone, abiotic and biotic component, food chain, food web, trophic levels, ecological pyramids, primary and secondary productivity, movement of energy and materials, ecological efficiencies, thermal stratification circulation and lake typology. Limiting factors, Laws of limiting factor, Impact of temperature, moisture and pH on organisms. Structure and function of some Indian ecosystems Aquatic (Freshwater marine and Estuarine) Planktonic organisms: Classification of organisms in water, distribution of plankton, food for planktonic organisms. Macrozoobenthos organisms: Classification of organisms in water, Distribution of zoobenthos, food for macroinvertebrates, water quality indicator organisms.	15
Unit III	Stressed water ecosystems: Point and non-point sources of pollution, assessment of freshwater pollution, assessment of freshwater using various parameters; water quality monitoring using abiotic factors (e.g. pH, Oxygen, Carbon dioxide, pH and the hydrogen ion concentration, Nitrogen, Phosphorus, BOD), Biomonitoring (phytoplankton, zooplankton and zoobenthos). Environmental Impact Assessment (EIA). Impact of environmental stress on biotic and abiotic factors. Water pollution, Eutrophication, algal blooms, water borne diseases, drinking water parameters, Bioremediation of polluted water bodies.	15

	National Lakes conservation program, Namami Gange Yojana, Sparsh Ganga Abhiyan.	
Practical		
	1. Estimation of D.O. content of water sample by Wrinkler method. 2. Estimation of the amount of free carbon dioxide in water sample. 3. Determination of salinity and chlorinity in water sample. 4. Determination of moisture content and total organic matter in soil sample. 5. Estimation of the alkalinity of water sample. 6. Quantitative study (total count and differential count) of planktons. 7. Calculation of similarity index between different communities. 8. Calculation of concentration of dominance for different communities. 9. Calculation of Shannon Weiner Index of diversity in different communities. 10. Study and observation of aquatic biodiversity of local water bodies.	30

MASTER’S IN ZOOLOGY			
Programme: Master’s In Zoology		Year: V	Semester: IX Paper: GE
Subject: Zoology			
Course: GE2		Course Title: Medical Laboratory Technology	
Course Outcomes: After studying this course, the students will be able to: 1. Work under different specialties of Laboratory Medicine (Biochemistry, Microbiology, Pathology and Blood bank departments respectively). 2. Work and contribute in National Accreditation Board for Testing and Calibration Laboratories (NABL) program.			
Credits:4			Generic Elective
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Unit	Topic		No. of Hours

Unit I	Basic laboratory principles - Code of conduct of medical laboratory personnel. Organization and functioning of clinical laboratory. Safety measures - safety equipment's, safety symbols. Hazards in the laboratory (chemical hazards, clinical hazards, electrical hazards, biological hazards). Waste disposal.	20
Unit II	Introduction of Common Laboratory Equipment's: Hot Air Oven, Incubator, Autoclave, Water Bath, Centrifuges. Microscope - Fundamentals of Microscopy, Resolution and Magnification, Light Microscopy, Electron Microscopy, PCR, Electrophoresis, UV trans illuminator etc. Specimen Collection, Processing and Analytical Techniques Collection and preservation of blood, urine, stool, sputum, pus, body fluids, swab. Preparation of blood smears. Sources of biological variations, pre-analytical variables.	20
Unit III	Preparation of reagents: Buffers and pH, Normal, percent and molar solution, normal saline –Methods of measuring liquids. Clinical Laboratory records - Modern Laboratory set up - Quality control: Accuracy, Precision, and Reference values. Disposal of biomedical waste laboratory safety protocols and guidelines.	20
Recommended Readings Textbooks • Textbook of Medical Laboratory Technology Clinical Laboratory Science and Molecular Diagnosis Darshan P. Godkar, Praful B. Godka • Textbook of Medical Laboratory Technology- Mrinalini Sant • Textbook of Medical Laboratory Technology- M. Sant		

- Textbook of Medical Laboratory Technology- Ramnik Sood

MASTER'S IN ZOOLOGY

Programme: Master’s in Zoology		Year: V	Semester: X
			Paper: DSC
Subject: Zoology			
Course: DSC		Course Title: Ichthyology - II A (Applied Ichthyology)	
Course Outcomes:			
After studying this course, the students will be able to:			
1. Apply principles of phylogeny to understand fish adaptations.			
2. Become familiar with principals of ecology and behavior of fishes.			
3. Become familiar with fish anatomy.			
Credits:4			Discipline Specific Course
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Theory			
Unit	Topic		No. of Hours
Unit I	Important cultivable fishes’ Important cultivable shellfishes Biology of cultivated fish and shellfish. Fish preservation, transport and marketing. Ecology and productivity of fish ponds. Pollution in relation to fisheries. Carp culture: Mono		15

	culture, Poly culture and Composite fish culture. Live fish culture. Management practices: weed, insect, and carnivorous fishes.	
Unit II	Maturation and fecundity, spawning and seed collection, induced breeding, hatching techniques and hatcheries, nursery management, packing and transport of fish. Integrated Aquaculture: Fish-cum poultry, Fish-cum duckery, Fish-cum piggery, Paddy-cum fish culture and Dairy-cum fish culture.	15
Unit III	Induced spawning and hybridization. Factors responsive for induced breeding, hypophysation. Use of different synthetic and natural hormones. Larvivorous fishes and public health. Fish diseases and their management. Exotic fishes and their merits and demerits, Cryopreservation of gametes and embryos. Ornamental fish culture.	15
Practical		
	1. Determination of free CO₂ 2. Determination of DO 3. Determination of turbidity 4. Qualitative and quantitative analysis of phytoplankton 5. Qualitative and quantitative analysis of Zooplankton 6. Qualitative and quantitative analysis of benthos 7. Project Work and Field Report, field visits will be integral part of the Practical.	30

Course: DSC

Course Title: Entomology – II B (Biology of Insects)

Course Outcomes:

After studying this course, the students will be able to:

1. Attain a solid foundation in insect biology, including general entomology, basic systematics, morphology, physiology, and biodiversity.

2. Understand evolution and biodiversity generation through macro- and micro-evolutionary processes, including how these processes have formed and diversified insects. 3. Develop the ability to design and perform a scientific study on insects, and to analyze results. 4. Develop an understanding of the distributions and abundances of organisms including insects, and their interactions with each other and the environment. 5. Develop an understanding of the distributions and abundances of organisms including insects, and their interactions with each other and the environment.		
Credits:4		Discipline Specific Course
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Integument: Structure, functions and modifications of insect cuticle, moulting and sclerotization Structure of an insect head, thorax and abdomen; Appendages of head (mouthparts and antennae) and thorax (legs and wings) Structure of a wing of an insect, types of wings, hypothetical wing venation, wing-coupling mechanisms, and flight mechanism Structure and modifications of male and female genitalia in insects. Structure and modifications of alimentary canal; food and feeding mechanism of a generalized insect with special reference to physiology of digestion in different insects.	15

Unit II	Structure and functions of blood and mode of circulation in insects' Principal organs of excretion of insects found in different habitats, physiology of excretion with special reference to osmoregulation in insects. Structure and functioning of various types of respiratory organs, modes of respiration, physiology of respiration in terrestrial, aquatic and endoparasitic insects Generalized plan of nervous system in insects and its modifications Neuroendocrine system in insects and the role of neurosecretion in various metabolic activities, metamorphosis and development of insects.	15
Unit III	Structure and functions of different types of visual and sound producing organs in insects. Structure, function and physiology of mechanoreceptors and chemo receptors in insects Bioluminescence: Light producing organs, mechanism and significance of light production in insect Structure of pheromone producing glands, different types of pheromones and their chemical nature Structure and modification of male and female reproductive systems in insects. Development: Structure of egg, maturation, cleavage, blastokinesis, formation of germ layers and segmentation; different types of larvae and pupae, Polyembryony and parthenogenesis in insects.	15
Practical		
	1. Study the modifications of insect heads on the basis of their orientation (picture). 2. Identify different types of appendages of insect (slide). 3. To study mouth parts and their modification (slide). 4. To study antennae and their modification(slide).	30

	5. Study different types of legs (slide). 6. Study different types of wings (slide). 7. Study of wing venation and wing coupling mechanism in insects. 8. Study of alimentary canal/digestive system and nervous system of Cockroach and Grasshopper. 9. Determination of pH of the gut content of cockroach. 10. Study different type of larvae and pupae. 11. Study the stinging mechanism of honey bee. 12. To study the anatomical and physiological basis of sound and light producing organ in insects. 13. Project Work and Field Report, field visits will be integral part of the Practical.

Course: DSC

Course Title: Animal Biotechnology-II C (Applied Animal Biotechnology)

Course Outcomes:

After studying this course, the students will be able to:

1. Play leading role in industry, research, and the public services.
2. Understand and appreciate major public concerns and issues associated with Animal Biotechnology.
3. Have an understanding and grasp of international research environment where the frontiers of knowledge in Animal Biotechnology are under research.
4. Be able to adapt and respond positively and flexibly to changing circumstances.
5. Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively.

Credits:4		Discipline Specific Course
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Gene transfer technology in animals: Viral and non-viral methods, sperm mediated gene transfer, transfection of animal cell lines and their immortalization, gene knock out animal models, current status of production of transgenic animals. Animal cloning: Techniques, relevance, case studies and ethical issues. In vitro fertilization (IVF) in humans, embryo transfer (ET) technology in humans, superovulation, Micromanipulation, IVF and embryo culture in farm animals (e.g. cow); embryo transfer in cattle, Gene transfer or transfection (using eggs and cultured stem cells): targeted gene transfer; transgenic animals (mice, sheep, pigs, rabbits, goats, cows, fish).	15
Unit II	Introduction to Biosafety regulations; Primary Containment for Biohazards and Biosafety Levels, Biosafety guidelines – Government of India. Definition of Genetically modified organisms (GMOs) & living modified organisms (LMOs); Roles of Institutional animal ethical committee, Review Committee on Genetic Manipulation (RCGM), Genetic Engineering Approval Committee (GEAC) etc. Prevention of cruelty on animals act Govt. of India, Concept of Bioethics, Public concerns on Human genome research and transgenics – Genetic testing and screening, Ethics in clinical trials and Good Clinical Practices (GCP), Ethical, legal, and social implications (ELSI) & Human genome project; Ethics in human cloning, patenting human genes.	15

Unit III	Intellectual property rights and its types-Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications, Protection of new GMOs, Basics of patents (Types, patent application and Specifications), concept of Prior Art and patent filling procedures, Process patent vs product patent. Introduction to General Agreement on Tariffs and Trade (GATT), World Trade Organization (WTO), World Intellectual Property Organization (WIPO) and Trade Related Intellectual Property Rights (TRIPS).	15
Practical		
	1. Preparation of tissue culture medium and membrane filtration; 2. Preparation of single cell suspension from spleen and thymus; 3. Preparation serum; Egg candling; Cell counting and cell viability; 4. Chick fibroblast culture; Trypsinization of monolayer and sub-culturing; 5. Transfection of cultured monolayer; Cryopreservation and thawing; Measurement of doubling time; 6. Role of serum in cell culture; Preparation of metaphase chromosomes from cultured cells; 7. Isolation of DNA and demonstration of apoptosis of DNA laddering; Cell fusion with PEG; 8. Permanent slide preparation setting up and maintenance of fish hepatocytes /murine macrophages. 9. Project Work and Field Report, field visits will be integral part of the Practical.	30

Course: DSC	Course Title: Immunology – II D (Applied Immunology)	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the immune system: Students may learn about the components of the immune system, how cells and molecules work together, and how signal transduction pathways modulate the immune response. 2. Apply knowledge: Students may learn how to evaluate how aberrations in immunoregulation can cause autoimmunity, immunodeficiency, allergies, and cancer. They may also learn how to apply immunology principles to develop new drugs, vaccines, and diagnostic techniques. 3. Learn how to communicate their views on the latest findings in written and oral formats. 4. Performing laboratory experiments: Students may learn how to perform common laboratory experiments, accurately record and analyze data, and present their findings in the context of scientific literature. 5. Critically interpreting data: Students may learn how to critically interpret published data relating to immunology research.		
Credits:4		Discipline Specific Course
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Immune response to infectious diseases: Mechanism of immune response during: viral infections [Influenza, HIV], bacterial infections [Corynebacteria, Mycobacterium] protozoan infection [Plasmodium, Trypanosoma and Leishmania],	15

	Helminthes infections [Ascaris, Schistosoma]. Disease of immune system and vaccines: Mechanism of autoimmune diseases- Systematic Lupus Erythromatous [SLE], Myasthia gravis, Rheumatoid arthritis, celiac disease. Cancer of blood cells- Lymphoma and Leukemia [Hodgkin and Non-Hodgkin]. Vaccines- historical background, routine vaccines, DNA vaccines, snake-antidotes. Production of monoclonal antibodies and its mechanism.	
Unit II	Immuno-technology: Separation of immune cells by flow cytometry [FACS]: Its principle and application. Principle and application of immune-precipitation. Functioning and application of microscopes: Immuno-fluorescence and confocal. Principle and application of in-situ hybridization technology-FISH [Fluorescence In-Situ Hybridization] and GISH [Genome In-Situ Hybridization]. Principle, methodology and application of following techniques- ELISA [Enzyme Linked Immunosorbent Assay], RIA [Radio Immuno Assay], Western blotting. Allergy evaluation: Principle and methodology of skin prick test for allergy.	15
Unit III	Transplantation immunology: Transplantation- History, graft vs. host rejection studies for specific transplantation i.e skin graft, kidney, liver and heart with reference to hyperacute, acute and chronic rejection and its mechanism. Immunosuppression- definition, drugs used for Immunosuppression and its mechanism of action. Xenotransplantation- definition and its application. Graft vs. host reaction and diseases- definition, mechanism, treatment and prevention. HLA phenotyping, lymphoproliferation assay, its working principle and applications. Blood groups- MN, ABO blood group and blood transfusion.	15
Practical		

	1. Preparation of Hyper Immune serum, its aliquots and serum heat inactivation. 2. Preservation and quality control measures of serum. 3. Immunoprecipitation test: single and double immune diffusion . 4. Haemagglutination assay. 5. ABO blood group analysis. 6. Project Work and Field Report, field visits will be integral part of the Practical.	30
Recommended Readings Textbooks • Textbook of Fundamental Immunology- Dr. Varun Kumar Sharma • Kuby Immunology- Judy Owen, Jenni Punt, Sharon Stranford, and Patricia Jones • Basic Immunology: Functions and Disorders of the Immune System- Abul Abbas, Andrew H. Lichtman, and Shiv Pillai • The Immune System- Peter Parham Reference Book • Vaccinology: An Essential Guide. 1st ed. Wraith DC, Goldman M. Oxford: Wiley-Blackwell; 2015. • Immunotoxicology: Immune Dysfunction and Diseases. 1st ed. Kimber I, Salikoff M, Basketter D. Dordrecht: Springer; 2015. • Allergy and Immunology. 1st ed. Mahmoudi M. New York: McGraw Hill; 2016. • Tumor Immunology and Immunotherapy. 1st ed. Prendergast GC, Jaffee EM. New York: Academic Press; 2013.		

- Immunotherapy in Transplantation: Principles and Practice. 1st ed. Kaplan B, Turka LA, Shaw LM. New York: Wiley-Blackwell; 2012.

MASTER'S IN ZOOLOGY

Programme: Master's in Zoology	Year: V	Semester: X
		Paper: DSE

Subject: Zoology			
Course: DSE1		Course Title: Human Physiology	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the mechanisms involved in digestion, respiration, blood, renal, and heart. 2. Understand the metabolism of carbohydrates, protein, lipids, and protein. 3. Understand the importance of macro- and micronutrients, and their deficiencies and effect on health. 4. Understand contemporary life-styles, parasitic microorganisms, and health. 5. Understand the anatomy of vertebrates, including their integumentary, circulatory, digestive, respiratory, urinogenital, and nervous systems. 6. Understand the sense organs in vertebrates.			
Credits:4			Discipline Specific Elective
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Theory			
Unit	Topic		No. of Hours
Unit I	Nutrition: Stimulation, secretion and action of digestive fluids (including enzymes and hormones). Digestion, absorption and assimilation of various food stuffs Human		15

	Digestive system - Digestion, absorption, energy balance, BMR. Sensory Physiology: Receptors, Pathways and physiology of smell and taste. Human Respiratory system - Comparison of respiration in different species, anatomical considerations, transport of gases, exchange of gases, waste elimination, neural and chemical regulation of respiration.	
Unit II	Blood and circulation in Human - Blood corpuscles, haemopoiesis and formed elements, plasma function, blood volume, blood volume regulation, blood groups, hemoglobin, immunity, hemostasis. Cardiovascular System: structure of myogenic heart, specialized tissue, ECG – its principle and significance, cardiac cycle, heart as a pump, blood pressure, neural and chemical regulation of all above. Human Nervous system - Neurons, action potential, gross neuro-anatomy of the brain and spinal cord, central and peripheral nervous system, neural control of muscle tone and posture. Nervous Coordination: Structure of neuron, nature, origin and propagation of nerve impulse, Synaptic transmission, Chemistry and functions of neurotransmitters. Sense organs - Vision, hearing and tactile response	15
Unit III	Excretory system - Comparative physiology of excretion, kidney, urine formation, urine concentration, waste elimination, micturition, regulation of water balance, blood volume, blood pressure, electrolyte balance, acid-base balance. Muscle physiology: Structure, kinds and characteristics of muscles, Mechanism of muscle stimulation and contraction. Thermoregulation - Comfort zone, body temperature – physical, chemical, neural regulation, acclimatization. Temperature tolerance, Poikilothermic, Homoeothermic adaptations and regulatory mechanisms. Stress and adaptation. Excretion and osmoregulation: Functions of kidney, Types of nitrogenous wastes in different animal groups and their excretion, renal excretion in	15

	vertebrates (urine formation in a mammal in particular), osmoregulation in fish, reptiles, aves and mammals.	
Practical		
	1. Preparation of haemin crystals from human blood 2. Determination of clotting and bleeding time 3. Counting of RBCs in human blood; Counting of WBCs in human blood 4. Determination of haemoglobin percentage in human blood. 5. Recording of blood pressure 6. Examination of radial pulse 7. Electro cardiography; Clinical examination of cardio vascular system 8. Stethography for recording chest movements; Vital capacity; Artificial respiration – ALBP method demonstration 9. Clinical examination of respiratory system; Pregnancy diagnostic tests demonstration; Normal cardiogram of amphibian heart; Effect of temperature on cardiogram. 10. Case History/spotters/calculations	30
Recommended Readings		

Textbooks

- Essentials of Animal Physiology- S. C. Rastogi
- Animal Physiology and Biochemistry- R. A. Agarwal, Anil K. Srivastava,
- Principles of Animal Physiology - Moyes/Schulte
- Animal Physiology and Biochemistry- H. R. Singh and Neeraj Kumar
- Animal Physiology, Fourth Edition- Richard W. Hill, A. Gordon

MASTER'S IN ZOOLOGY

Programme: Master’s in Zoology		Year: V	Semester: X Paper: DSE
Subject: Zoology			
Course: DSE1	Course Title: Osteology		
Course Outcomes: After studying this course, the students will be able to: 1. Understand Osteology of Bony fish (<i>Labeo</i>), Amphibia (Frog), Reptilia (<i>Varanus</i>), Aves (Fowl), Mammalia(Rabbit/Rat) • Understand Vertebral column anatomy.			
Credits:4			Discipline Specific Elective
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Theory			
Unit	Topic		No. of Hours
Unit I	Definition of osteology; Introduction of Osteology; Cartilage: (Hyaline cartilage, elastic cartilage, fibrous cartilage, calcified cartilage); Bone: general characteristics		15

	of bone, types of bone (Cartilage bone, membrane or dermal bone); Anatomical Description: Acetabulum, Acrocoracoid, Acromian, Condyle, Coracoid, Deltoid ridge, Glenoid cavity, Ilium, Ilio-ischiatic fenestra, Ischium, Odontoid process, Olecranon process, Patella, Pubis, Scapula, Shaft, Sigmoid cavity, Sternum, Symphysis, Temporal arch, Zygomatic arch.	
Unit II	Introduction of Skull; General characters of skull bone; Cranium: Occipital region, Parietal region, Frontal region, Ethmoidal region; Sense Capsule: Auditory capsule, Orbital capsule, Olfactory capsule; Visceral Skeleton: Mandibular arch, Hyoid arch, Branchial arches; Foramina and nerves; Dentition.	15
Unit III	Vertebral column anatomy: General characters of vertebra; Centrum; Cervical region (1- Atlas, 2- Axis, 3- Rest of the vertebrae), Thoracic region (vertebrae with ribs), Lumbar region (ribless vertebrae), Sacral region, Caudal region; Ribs and Sternum; Girdle.	15
Practical		
	1. Osteology of Bony fish (<i>Labeo</i>), Amphibia (Frog), Reptilia (<i>Varanus</i>), Aves (Fowl), Mammalia (Rabbit/Rat) 2. Jaw suspension in vertebrates.	30

	3. Study of Different skulls of vertebrates.	
Recommended Readings Textbooks • A Textbook of Comparative Osteology of Vertebrates by Deepak Rawal, LAMBERT academic Publishing. • Comparative Study of Bones by Prof. S. C. Agarwal and Dr. J. C. Agarwal; Rajeeva Parkashan Meerut.

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology			Year: V	Semester: X
---------------------------------------	--	--	----------------	--------------------

		Paper: DSE
Subject: Zoology		
Course: DSE2	Course Title: Biochemistry	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the nature of biochemistry. 2. Understand the Physical and chemical properties of molecules as a linkage of biochemistry. 3. Understand the concept and properties of acid-base relationship.		
Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	The molecular logic of life; Buffering in biological Systems; pH, pK, acids, bases, buffers, Handerson – Hassel Bach equation, weak bonds (Ionic, Hydrogen, Hydrophobic, Vander Waal interactions), covalent bonds, Water as a universal solvent. Molecular properties: Basic concept and significance of diffusion, Osmosis, Gibb’s Donnan equilibrium, Viscosity, Surface tension and Colloidal	15

	state. Bioenergetics; Thermodynamic laws as applied to biological system, applications of free energy functions; High energy compounds with special reference to ATP. Biological oxidation-reduction reactions; Electron transport chain (ETS) and Oxidative Phosphorylation. Inhibitors of ETS and oxidative phosphorylation.	
Unit II	Biomolecules; Chemical structure, classification and sources of biochemically significant carbohydrates. Chemical structure, classification and sources of biochemically significant lipids. Proteins – Amino acids and their classification, Peptide synthesis, Protein sequencing, Functional diversity, Structure and Conformation of proteins (protein structural hierarchy, Ramachandran plot, domains, motif and folds). Enzymes: Nomenclature and classification, kinetics, mechanism of enzyme action, factors influencing enzyme activity Isozymes. Coenzymes: Chemical structure and significance of coenzymes.	15
Unit III	Metabolism of carbohydrates: Steps, enzymes and inhibitors of glycolysis and TCA cycle, Glycogenesis, Glycogenolysis, gluconeogenesis, and the pentose phosphate pathway. Metabolism of proteins: Basic concept of protein metabolism with reference to decarboxylation, transamination, transmethylation and deamination of essential and non-essential amino acids. Glycosylation of proteins and glycosylation inhibitors. Biosynthesis of urea, creatine and heme. Metabolism of Lipids: Basic concepts of lipids metabolism with reference to biosynthesis and utilization of fatty acids of lipids. Significance of ketone bodies and cholesterol. Integration of metabolism and concept of metabolic regulations. General introduction to metabolic disorders. Vitamins: Chemical structure, sources and deficiency state of fat soluble and water-soluble vitamins. Minerals: Macro and	15

	micro nutrients. Sources and biochemical significance of minerals e.g. Sodium, Potassium, Calcium, Magnesium, Iron, Chloride, Zinc and Phosphorus and selenium. Basic concept of xenobiotic compounds and their metabolism. (Phase 1 and phase 2 reactions with examples).	
Practical		
	1. Qualitative identification of carbohydrate, protein and lipid. 2. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch). 3. Identification tests for Proteins (albumin and Casein). 4. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method). 5. Qualitative analysis of urine for abnormal constituents. 6. Determination of blood creatinine. 7. Determination of blood sugar. 8. Determination of serum total cholesterol. 9. Preparation of buffer solution and measurement of pH. 10. Study of enzymatic hydrolysis of starch. 11. Determination of Salivary amylase activity.	30
Recommended Readings Textbooks: • Animal Physiology and Biochemistry- H. R. Singh and Neeraj Kumar • Illustrated Biochemistry - Harper		

- Biochemistry, -Satyanarayana
- Biochemistry and Molecular Biology Compendium- Roger L. Lundblad
- Textbook of Biochemistry for Medical Students- D. M. Vasudevan
- Text Book of Biochemistry- Dr. M. K. Gupta

Programme: Master's In Zoology		Year: V	Semester: X Paper: DSE
Subject: Zoology			
Course: DSE2		Course Title: Metabolism of Biomolecules	
Course Outcomes: After studying this course, the students will be able to: 1. Understand the nature of biomolecules. 2. Understand the metabolic pathway of biomolecules. 3. Understand the concept biosynthesis of biomolecules.			
Credits:4			Discipline Specific Elective
Max. Marks: As per Univ. rules			Min. Passing Marks: As per Univ. rules
Theory			
Unit	Topic		No. of Hours
Unit I	Glycolysis pathway, regulation and energy yield. Pasteur Effect and Crabtree effect, Fate of pyruvate - formation of lactate and ethanol. Citric acid cycle, regulation and energy yield		15

	Pentose Phosphate pathway,	
Unit II	Gluconeogenesis, Glycogenolysis and glycogenesis. Diabetes Mellitus (elementary treatment) Diabetes ketoacidosis. Catabolism of lipids – β oxidation of fatty acids, energy yield. Ketogenesis, De novo synthesis of fatty acids. Biosynthesis of triacylglycerols and lecithin. Biosynthesis of cholesterol	15
Unit III	Biochemical nitrogen fixation, utilization of ammonia. Amino acid metabolism – deamination, decarboxylation, transamination. Inborn errors of aromatic and branched chain amino acid metabolism. (Phenylketonuria, Alkaptonuria, Albinism and Maple syrup urine disease). Biosynthesis and regulation of purine and pyrimidine nucleotides - de novo and salvage.	15
Practical		
	1. Qualitative identification of carbohydrate, protein and lipid. 2. Qualitative tests of functional groups in carbohydrates, proteins and lipids. 3. Paper chromatography of amino acids; Action of salivary amylase under optimum conditions. 4. Effect of pH and temperature on the action of salivary amylase; Demonstration of protein separation by SDS-PAGE. 5. Qualitative identification of carbohydrate, protein and lipid.	30

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: X

Paper: DSE

Subject: Zoology

Course: DSE3

Course Title: Molecular Biology

Course Outcomes:

After studying this course, the students will be able to:

1. Understand the fundamental molecular mechanisms underlying cellular processes such as DNA replication, transcription, translation, and gene regulation.
2. Understand the proficiency in a variety of molecular techniques commonly used in research laboratories, including PCR (Polymerase Chain Reaction), gel electrophoresis, DNA sequencing, cloning, and recombinant DNA technology.
3. Analyze genetic data using bioinformatics tools and databases, enabling them to interpret DNA sequences, identify genes and regulatory elements, and analyze gene expression patterns.
4. Apply their knowledge of molecular biology to address scientific questions and solve real-world problems in fields such as medicine, agriculture, biotechnology, and environmental science.

Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Introduction to Molecular Biology: Structure and organization of genome. Human genome project, Law of DNA constancy, Cot curve (cot curve), c-value paradox, DNA renaturation kinetics, Determination of T _m value. Chemistry of gene: Structure of nucleic acids (A, B, C and Z-DNAs, RL-model of Sasissekharan; supercoiling; genetic and non-genetic RNAs), Watson and Crick Model of DNA. DNA Topology. DNA as genetic material, DNA Replication - (evidence for semi conservative replication); Prokaryotic and eukaryotic DNA replication, Molecular Mechanisms of DNA replication, Enzymes and accessory Proteins involved in DNA replication. DNA damage and DNA repair (excision repair, mismatch repair and SOS repair), Genetic disease in humans. Recombination, Homologous Recombination, Holliday junction, FLP/FRT and Cre/Lox recombination, Rec. A proteins and recombinases. Fine structure of gene; organization of typical eukaryotic gene, Benzer's analysis of r-II locus by deletion and complementation mapping; General introduction to complexities of gene regulation in eukaryotes, Regulation of Gene expression in Prokaryotes and Eukaryotes: Operon concept (E. coli lac operon, trp operon, L-arabinose operon), DNA methylation, Heterochromatinization, Environmental regulation of gene expression.	15

Unit II	Mutation: Chromosomal aberrations (Numerical and Structural), Gene mutation: different types of mutations, mutagens, Detection of sex linked lethal and visible mutations in Drosophila. Transcription- Prokaryotic and Eukaryotic transcription, RNA polymerase and types of RNA Polymerase in eukaryotes and prokaryotes, General and specific transcription factors, transcription signals, promoter sites, rho and sigma factor, Regulatory elements and mechanisms of transcription regulation, Transcriptional and post-transcriptional modification. Reverse transcriptase, RNA processing; Modifications in RNA: 5'-Cap formation, Transcription termination, 3'-end processing and polyadenylation, Splicing; Ribonucleoproteins, RNA editing, Nuclear export of mRNA and stability.	15
Unit III	Translation-Prokaryotic and eukaryotic translation, the translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation, co- and post-translational modifications of proteins. Genetic code: Properties, codon usage patterns and codon bias (Wobble Hypothesis), new genetic codes in mitochondria and ciliate protozoa. Nucleic acid sequencing- Introduction and landmarks in DNA sequencing, Maxam Gilbert method, Sanger's method, introduction to automated DNA sequence, Pyro sequencing, Nextgen sequencing, Whole genome sequencing. Antisense and Ribozyme Technology- Molecular mechanism of antisense molecules, Biochemistry of ribozyme; hammer- head, hairpin and other ribozymes, strategies for designing ribozymes, Applications of antisense and ribozyme technologies.	15
Practical		

	1. Isolation of genomic DNA 2. Purity determination and quantization of DNA; 3. Electrophoresis of Proteins; Electrophoresis of DNA - linear, circular and super coiled; 4. Southern blotting; Western-blotting; RFLP analysis; Isolation of RNA; Northern blotting; Nucleic acid hybridization. 5. Study of metaphase chromosomes from permanent slides; 6. Study of various stages of meiosis from permanent slides; 7. Extraction/Isolation of genomic DNA and RNA from mammalian blood; Restriction digestion of with restriction enzymes; 8. Agarose Gel Electrophoretic analysis of DNA, and RNA; 9. Cellular fractionation of functional mitochondria Isolation of mitochondria from mouse liver by differential centrifugation. 10. Identification of mitochondrial fraction by assay of marker enzyme; 11. Observation of DNA fragmentation in apoptotic cells and Principle of FACS.	30
Recommended Readings Textbooks • Molecular Biology- Anjali Priyadarshini and Perna Pandey • Molecular Biology of the Cell, 7th Edition- Bruce Alberts • Molecular Biology-P.S. Verma and V.K. Agarwal • Practical Techniques in Molecular Biotechnology- Bal Ram Singh and Raj Kumar • Textbook of Molecular Biology- Sastry

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: X

Paper: DSE

Subject: Zoology		
Course: DSE3		Course Title: Aquaculture
Course Outcomes: After studying this course, the students will be able to: • Describe the Principles of Aquaculture • Identify the Design Construction of pond • Indicate the Biological characteristics of aquaculture species • Acquire knowledge on measurement of growth and water and soil quality parameter		
Credits:4		Discipline Specific Elective
Max. Marks: As per Univ. rules		Min. Passing Marks: As per Univ. rules
Theory		
Unit	Topic	No. of Hours
Unit I	Aquaculture Systems and Methods: Scope and definition; origins and growth of aquaculture; biological and technological basis; Traditional, extensive, semi-intensive and intensive culture; monoculture, polyculture, composite culture, mixed culture, monosex culture; cage culture, pen culture, raft culture, race way	15

	culture, culture in circulatory systems; warm water and cold-water aquaculture; sewage – fed fish culture, integrated fish farming. Selection of sites: Survey and location of suitable site – topography; soil characteristics; acid sulphate soils; water source; hydrometeorological data.	
Unit II	Aquaculture Engineering : Design and construction of pond, layout and design of aquaculture farm, construction, water intake system, drainage system; aeration and aerators; recent advances in aquaculture engineering; tips for better aquaculture practices; design and construction of hatcheries. Hydrology of ponds : Types of ponds; sources of water – precipitation, direct run off, stream inflow, ground water inflow, regulated inflow; losses of water– evaporation, seepage, outflow, consumptive use, water budgets of embankment ponds; water budget of an excavated pond; water exchange.	15
Unit III	Selection Of Species: Biological characteristics of aquaculture species; economic and market considerations; seed resources, collection and transportation. Pre Stocking Management: Sun drying, ploughing / tilling, desilting, liming and fertilization, eradication of weed fishes. Stocking: Acclimatization of seed and	15

	release; species combinations; stocking density; ratio. Post Stocking Management : Water and soil quality parameters required for optimum production, control of aquatic weeds and aquatic insects, algal blooms; specific food consumption, food conversion ratio (FCR), protein efficiency ratio, true net protein utilization, apparent net protein utilization, biological value of protein.	
Practical		
	1. Preparation and of an aquarium in a laboratory study of aquarium fishes with Zoological and common names 2. Visit a local pond and collect the edible fresh water fishes and culture in an aquarium 3. Study of types and management of fish culture i.e.; breeding, hatching, nursery, rearing and stocking ponds in nearby place/with the help of charts/models 4. Estimation of organic matter of bottom soil 5. Visit to local fish seed production centre and local fish farms 6. Collection of pond, river or ditches water for the study of physico-chemical analysis of water 7. Collect a fresh water sample from the local fresh water habitat for the study of microscopic organisms like protozoans, Daphnia, coelenterates etc. for identification in laboratory	30

MASTER'S IN ZOOLOGY

Programme: Master's In Zoology

Year: V

Semester: X

Paper: GE

Subject: Zoology

Course: GE1

Course Title: Conservation Biology

Course Outcomes:

After studying this course, the students will be able to:

1. Learn how to identify species, habitats and life cycles of birds, fish, and mammals.
2. Apply conservation strategies to promote biodiversity and mitigate threats. They can also learn how to implement sustainable practices that balance conservation with human needs.
3. Learn how to monitor and survey wildlife.
4. Learn about the principles of wildlife ecology and how to understand wildlife habitats.

Credits:4

Generic Elective

Max. Marks: As per Univ. rules

**Min. Passing Marks:
As per Univ. rules**

Unit

Topic

No. of Hours

Unit I

Introduction to Conservation Biology: Definition, scope, and importance of conservation biology. Levels of biodiversity: Genetic, species, and ecosystem diversity. Threats to biodiversity: Habitat loss, climate change, pollution, overexploitation, invasive species. Conservation approaches: In-situ and ex-situ conservation.

20

Unit II

Conservation Strategies and Policies. Protected areas: National parks, wildlife sanctuaries, biosphere reserves. Endangered and endemic species of India.

Role of organizations: IUCN, WWF, UNEP, and national agencies. Wildlife Protection Act (1972), Biodiversity Act (2002), and other conservation laws in India. Institutions and Their Role in Conservation: Zoos, Natural History Museums, and Collections. Zoological Survey of India (ZSI) and its regional centers.

20
